

Digitise documents while you write

Digital writing is about to become one of the four most common ways to interact in a rapidly expanding world of computing, in addition to touch, voice and gesture

Anoto Group AB is a global leader in digital writing solutions, which enables fast and reliable transmission of handwriting into a digital format. Anoto operates worldwide through a global partner network and is currently in use across multiple business segments e.g. consumer, healthcare, banking and finance, transportation and logistics and education. The Anoto Group has over 100 employees and is headquartered in Lund (Sweden), with offices in Basingstoke and Wetherby (UK), Los Angeles and Boston (US) and Tokyo (Japan).

Modern technology with a familiar feel

The Anoto digital pen works and feels like a traditional pen, but captures everything you write as digital data in real time. Anoto has combined small-sized, cost-efficient components with low power consumption and a long battery life to create the most versatile digital pen ever. Built-in Bluetooth and USB capabilities keep you connected, and with minimal to no additional training or changes to your business processes required, you can write live, right now.

Within our high precision solutions a pen is needed to make a valid handwritten signature, this remains the most common, universal way to identify a person in relation to contracts, applications, forms and transactions. Signature on paper is still needed in most markets. Anoto digital pens provide exact positioning on any Anoto microdot patterned surface, be it paper forms, whiteboards or glass displays. Anoto offers a secure, identical and efficient solution to capture ink on paper and transfer data electronically.

Focus on pen-centric applications

In healthcare, digital pen technology is already being used in areas of the NHS, such as midwife services for capturing patient data digitally, critical to improving patient care. As a perfect data capture solution that requires minimal training, it is extremely popular with staff and causes minimal workflow. The Welsh Ambulance Service Trust (WAST) is deploying 1,700 digital pens across the service so that it's paramedic staff can generate an electronic patient record at source, and immediately transfer this record to their back-end clinical systems

A personal, intuitive way to connect

"It's just a pen" – everybody knows how a pen works. A digital pen should be as intuitive as a pencil or a ballpoint pen and it should be easy to plug and play with devices and applications. With many manufacturers and suppliers looking to enable their products with support for stylus or digital pen input, the trend is moving towards touch and pen to replace mouse and keyboard.

Anoto has set up a subsidiary – We-Inspire Inc. – based in Los Angeles, California, a company specialising in full digital collaboration environments. "The We-Inspire Inc. solution is a natural extension of Anoto's products and ecosystem and it is an exciting opportunity to expand our business", said Stein Revelsby, CEO of Anoto Group AB.

Anoto offer a truly unique collaboration tool that can be used across any corporate environments, where meetings are held and teams or groups need to generate ideas to boost productivity and creativity. By combining the intuitiveness and use of traditional surfaces with the power of computing, as well as Anoto digital pens and surfaces, up to seven participants can work simultaneously on a single application or several different tasks in parallel, this solution offers an enjoyable environment.

The future

Anoto predicts a future where a single Anoto digital pen will enable people to capture data and notes on paper, write, sketch, draw and take notes on a tablet computer or a wall and then connect, share and interact in a seamless environment, in the field, in the office or at home.
